Inks and substrates:

As physical properties of ink (adhesion, weather resistance etc.) are different depending on media, please be sure to have a print test in advance. Depending on the application, primers, other surface treatment or surface protection such as lamination may be

Please pay attention to the following notes in order to use safely. •Do not look directly into the UV light source nor place your hand, or expose your skin directly to the UV light source. •Depending upon print mode, some VOC emittance from printed parts not yet cured and hardened may occur. In addition, please be sure to read and follow the instructions and guidelines of the manual carefully.

Some of the samples in this catalog are artificial renderings. Specifications, design and dimensions stated in this catalog may be subject to change without notice (for technical improvements, etc). The corporate names and merchandise names written on this catalog are the trademark or registered trademark of the respective corporations. Inkjet printers print using extremely fine dots, so colors may very slightly vary after replacement of the printing heads. Also note that if using multiple printer units, colors could vary slightly from one unit to other unit due to slight individual differences. The specifications described in this catalog are as of June 2022.

Automation of printing processes

Adaptable to "Mimaki Device Language (MDL)" to realize automation of printing processes

Using MDL commands allows you to automate printer control, job management, and workpiece conveying device operation from an external device

*When using MDL commands, refer to the separate MDL commands manual included in the SDM *Please note that machine failures due to MDL commands may not be covered by our warranty.

Safety notice:

This product is equipped with UV irradiation equipmer

*The time taken for setting the material, the printer's operating time after printing, etc. are not include

Head layout enables two-layer simultaneous printing

The staggered printhead arrangement allows two-layer simultaneous printing with both process and spot colors to maintain high productivity.*

The UJF-6042MkII e and UJF-3042MkII Ex e can be equipped with light color (Lc/Lm) inks, enabling CMYK + LcLm + Spot colors (W+W, W+Cl, W+Pr, or Pr+Cl) color sets

By adding light colors, smoother gradations and natural skin tones can be expressed to produce lively prints. *Some ink sets may not allow simultaneous printing. All heads must be loaded with ink.

Mimaki's image quality control technology ensures more beautiful prints

High image quality achieved with the MFD2 (Mimaki Fine Diffusion2) technology

The image processing function RasterLink7 carries out hybrid image processing combining the commonly-used "pattern dither method" and "error diffusion processing." Before printing, the RIP software processes the image data using MFD2, which suppresses noise and color unevenness and realizes beautiful prints. (Japan Patent No. 5230816)

Waveform control

Thanks to Mimaki's unique advanced ink droplet ejection control, droplets with high circularity are ejected to make them accurately land on the media, enabling sharp expression of characters, lines, and edges.

automatically selected and printed.

<Without MAPS4

<Droplets ejected with low circularity>

Gaps and overlaps occur between the dots, resulting in coarse image qualit

Sharp finish with less graininess

print

Reliable functions for stable operation

NCU (Nozzle Check Unit)

NRS (Nozzle Recovery System)

If there is a nozzle problem that cannot be solved by cleaning, it automatically replaces the defective nozzle with an alternate one for each nozzle, which enables continuous printing without lowering printing speed. NRS is automatically set based on the NCU data.

MAPS4 (Mimaki Advanced Pass System 4) Variable dots Banding (horizontal stripes) and uneven color can be reduced to realize smooth prints by printing pass boundaries fading in gradation. Based on printing conditions such as media/ink type and resolution, the most suitable gradation pattern is

Three different droplet sizes including a minimum of 5pl, are used for high-quality prints with reduced graininess.

MCT (Mimaki Circulation Technology)

An ink circulation mechanism is provided in the ink tank and ink path. It circulates white ink periodically to prevent nozzle trouble due to deposited ink pigments and to stabilize printing performance

High-performance inks expand the range of applications

Rigid UV ink "LH-100" with excellent color rendering The flexible UV ink "LUS-120" enables printing on and reproducibility

The rigid UV ink "LH-100" provides excellent color rendering and reproducibility. With its high scratch resistance, it can be widely used for goods such as smartphone cases and key chains, and for printing original designs on parts and gadgets.

Precision control of clear ink that offers valuable new printing effects

"Mimaki Clear Control (MCC)" has been newly added to produce high-quality clear prints. MCC minimizes the ink curing time by performing clear ink printing and UV-light irradiation simultaneously, and provides a gorgeous glossy clear finish that reduces dust adhesion and air bubbles.

Surface hardening Gloss, Matte, and Embossed prints and 129 types of textured prints using clear ink for enhanced design

Clear ink for a Glossy finish, a Matte finish for a subdued matte effect, or Embossed printing, which prints partial areas multiple times for a glossy, three-dimensional effect, can be used to create high value-added prints,

creating distinctive textures and a sense of luxury. In addition, the "ARTISTA UV Texture Library" is available to provide 129 types of textures. Texture printing with clear ink can realize more elaborate designs. The ARTISTA UV Texture Library will be registered on your computer when RasterLink7 is The ARTISTA UV Texture Library installed.

allows selection from a wide variety of textures

soft materials such as leather and TPU

This ink has 170% stretchability after curing. Its ink film is flexible and bendable. Excellent beauty and durability, and ideal for printing on soft materials such as leather and polyurethane and other applications that require bending.

Inkjet primer increases ink adhesion

The PR-200 inkjet primer can be used to increase ink adhesion. When color ink alone does not adhere well to the material, an inkjet primer can be used to improve adhesion. PR-200 can be used to improve adhesion to resinous materials, glass, metal, and materials with various surface finishes.

Automatic primer application by inkjetting

The primer can be applied only to required areas by inkjetting. This feature can retain the texture of the material that would be lost in manual primer application
